(Re)connect with *Color* Combos

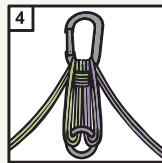

1 Choose two paracord colors (3 ft each)

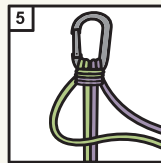

2 Taking the two colors together evenly, loop the cording as one through the bottom of the carabiner

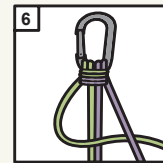

3 Slide the round metal key ring through the paracord to the desired length

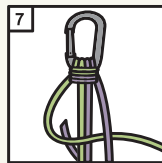

4 Bring the set of cords back up and through the carabiner, with the two sets of one color on each side

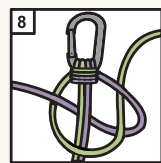

5 Keeping the pairs of color paracords together as one, cross the left side over the middle

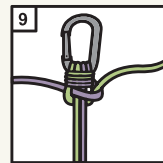

6 Next, take the right side cords over the top of the crossed left

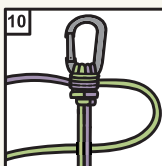

7 Then, cross the right side cords underneath the middle cord section

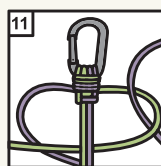

8 Bring the ends of that same pair of cords through the loop on the left

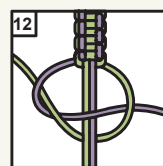

9 Pull both side cords tight

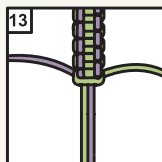

10 Now do the reverse, with the cords from the right side going behind the middle section

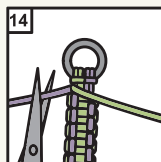

11 Bring the left side cords around the back of the middle section, pushing through the loop on the right and mirroring the first knot

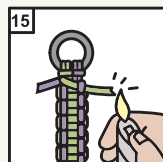

12 Start making knots back and forth across the cording, alternating sides towards the carabiner clip

13 Tighten knotting and cords throughout the weaving process

14 When reaching the end, cut the two paracords close to the braid

15 Carefully use a lighter to melt the cut cords and close the weave, pressing the body of the lighter to seal the ends closed
